## Disclaimer

The author - PaNELTECH Ltd - serves the right to introduce changes in this catalog without prior notice. The catalog is not an offer in the legal meaning.

## INTRODUCTION

PaNELTECH Ltd is a company specialized in building services and production of building materials. We have been present on the market of investment and industrial goods since 1989. High quality of our products is a result of modern production technology and application of materials and components supplied by renowned domestic and foreign companies. Thanks to our knowledge, experience and engagement we are able to offer high quality building services and satisfy the changeable needs of our Customers.

We are building our competitive advantage mainly by introducing modern and innovative products and technologies. As a result of this strategy in the past few years we made several important investments, such as purchase and installation of modern machinery park for production of industrial and coldroom doors, new expanded polystyrene (EPS) production line and new EPS and mineral wool sandwich panel production line. However we are most proud of our latest investment in one of the Europe's most modern and innovative polyurethane panels production line. Thanks to this investment we have introduced 3 new products:

- **Sandwich panels with PUR core, type PW PUR,**
- **Sandwich panels with PIR core, type PW PIR,**
- **Insulation panels in soft facings, type PW PIR SOFT.**

We have to underline the fact that the line is equipped in several innovative solutions mainly in the area of quality control. Thanks to them our panels distinguish themselves on the market with their technical parameters, durability and precision.

## SANDWICH PANELS APPLICATION

Sandwich panels can be applied as:

- roofs and roof coverings
- external walls and wall claddings
- walls and ceilings within the external structure of the building.

Sandwich panels PaNELTECH PW PUR and PW PIR are a group of modern composite products, used widely in building industry. Sandwich panels comprises of two steel sheet facings, resistant to corrosion, and an insulation core made of polyurethane foam.

The main advantages of sandwich panels are:

- high mechanical endurance
- high heat insulation,
- high vapour and air tightness of the joints,
- easy and fast installation,
- lower investment cost in comparison with traditional ways of building

In particular sandwich panels can be applied in:

- Industrial buildings, including production facilities and storehouses,
- Commercial buildings and offices,
- Food industry facilities, including coldrooms and freezer rooms,
- Agricultural objects
- Sport halls.

## SANDWICH PANELS CHARACTERISTICS

**Panel facings** are made of galvanized steel sheet coated with polyester paint, thickness from 0,4 to 0,6 [mm] made in accordance with the norm PN-EN 10346:2009. The steel we use to produce our panels are delivered by biggest world steel concerns, such as Arcelor Mittal, Voest Alpine or Thyssen Krupp.

The **core of the panel** can be made of polyurethane foam (PUR) or (PIR) with density of about  $40 \pm 3$  [kg/m<sup>3</sup>], made in accordance with the norm PN-EN 13165 (including dimensions stability and heat insulation). A declared heat conductivity value of foam is PUR  $\lambda D = 0,023$ [W/mxK], PIR  $\lambda D = 0,023$ [W/mxK].

Technical documentation of the panels was developed in accordance with the norm 14509:2010. Initial type tests were conducted in domestic laboratories, fire tests we made in certified units, such as Building Research Institute, Fire Research Department, notification no. 1488 and Research facility Fires Batizovce, Slovakia, notification no. 1396. On the basis of tests results the producer issued a declaration of conformity with European Norm and marked the product with CE sign (conformity evaluation system 3).

PaNELTECH sandwich panels were also granted a hygienic certificate of National Institute of Hygiene.

## THE SCOPE THE OFFER

Within the range of polyurethane panels we offer following products:

- Wall panels with visible joint, type PW PUR-S and PW PIR-S, available thickness: 40, 60, 80, 100, 120 [mm];
- Wall panels with hidden joint, type PW PUR-SU and PW PIR-SU, available thickness 60, 80, 100, 120 [mm];
- Coldroom panels, type W PUR-CH and PW PIR-CH, available thickness: 120, 160, 180, 200 [mm];
- Roof panels, type PW PUR-D and PW PIR-D, available thickness: 40/82, 60/102, 80/122, 90/132, 100/142, 120/162, 160/202 [mm].

## PACKAGING AND TRANSPORT

For transportation the panels are packed in packages, that are secured with protective stretch foil. The quantity of panels depending on panel thickness are shown in tables below.

Table no.1. Packaging of wall sandwich panels PaNELTECH, type PW PUR-S, PW PUR-SU, PW PIR-S and PW PIR-SU.

Panel thickness, [mm]	40	60	80	100	120
Maximal number of panels in the package [pcs.]*	16	18	14	11	9

\* in accordance with customer's clear instruction more panels can be loaded in the package, but it may cause some deformations on the bottom facings of the lower panels in the package.

Table no.2. Packaging of coldroom sandwich panels PaNELTECH, type PW PUR-CH and PW PIR-CH.

Panel thickness, [mm]	120	160	180	200
Maximal number of panels in the package [pcs.]*	9	7	6	5

\* in accordance with customer's clear instruction more panels can be loaded in the package, but it may cause some deformations on the bottom facings of the lower panels in the package.

Table no.3. Packaging of roof sandwich panels PaNELTECH, type PW PUR-D and PW PIR-D.

Panel thickness, [mm]	40/82	60/102	80/122	90/132	100/142	120/162	160/202
Maximal number of panels in the package [pcs.]*	18	14	10/12	10	8/10	8	6

\* in accordance with customer's clear instruction more panels can be loaded in the package, but it may cause some deformations on the bottom facings of the lower panels in the package.

The packages are loaded on trucks with special forklifts with maximal forks spread of 4 meters. The forks must be secured with special felts in order to avoid scratching of panel surface.

On the building site the panels have to be unloaded with above mentioned forklifts or other suitable lifting devices. In case the panels are shorter than 6m the unloading can be handled with a single forklift. If the panels are longer two forklifts should be used. In case the crane is used proper supports and catches should be applied in order to avoid damages to the panels.

The shipment should be done by trucks adopted to panel transportation. The following conditions must be kept

- the width of the loading case shouldn't be at least 2450 [mm],
- free access to the sides of the loading box must be ensured,
- the panels must be secured with belts and spacers to avoid shifting of the packages,
- the belts must be tightened carefully,
- there can be maximum 2 packages in a pile.

## INSTALLATION RECOMMENDATIONS

Installation works should be carried out by trained and experienced employers. The panels should be cut only with special fine-grained sawing machines or steel sheet shears. Any grinders or other devices that could damage the product must be avoided. After the installation the surface of the panel should be cleaned of PU foam and steel file dust.

It is also recommended to remove the protective foil from the surface of the panels up to 14 days after delivery to the building site.

## TECHNICAL SUPPORT AND OFFER COMPLEXITY

Thanks to our experienced and qualified technical advisors and sale managers we ensure proper assistance and support on every stage of building process.

We also offer high quality services including installation of steel structures and sandwich panels, as well as general execution of industrial and agricultural building facilities ("turn key" investments).

Except for sandwich panels in PUR, PIR, EPS and mineral wool core we offer:

- flashing systems,
- joining and assembly elements,
- PVC and aluminium joinery,
- industrial and coldroom doors,
- gutter systems,
- EPS boards and shapes,
- steel structures,
- Hormann gates and loading systems.

More detailed information can be found on our web-site [www.paneltech.pl](http://www.paneltech.pl)

## DISCLAIMER

All solutions shown in this catalog are just examples and must be discussed with a designer or architect. Paneltech does not bear any responsibility for mistakes arising from wrong interpretation or misuse of the information presented in the catalog.

Additional information, including:

- General Warranty Conditions,
- General Sale Conditions,
- Conditions of panel maintenance and proper preservation of its surface,
- Conditions of panel transportation, loading, unloading and storage,
- Installation instructions,

Can be found on the company's web-site [www.paneltech.pl](http://www.paneltech.pl).

# WALL SANDWICH PANELS WITH VISIBLE JOINT, TYPE PW PUR-S AND PW PIR-S

## PANEL APPLICATION

PW PUR-S and PW PIR-S panels are applied as ceilings external walls and internal division walls, installed vertically or horizontally on single- or multi-span structure.

In particular the panels can be applied in industrial buildings, store houses and logistic centres, commercial buildings and offices, food industry facilities, agricultural objects, sport halls.

Dimensions of panel are following:

- standard width: 1130mm (option: 1000 and 1050 [mm])
- available length: from 2 to 15,35 [m]
- available thickness: 40, 60, 80, 100, 120 [mm]

## PANEL CHARACTERISTICS

Tables 4, 5 and 6 present chosen PW PUR-S / PW PIR-S panel characteristics.

Table 4. Thickness and weight of PW PUR-S / PW PIR-S panels.

Panel thickness	Panel weight	Foam density	Sealing on the joint
40	9,9	40 ± 3	PU gasket
60	10,7	40 ± 3	PU gasket
80	11,5	40 ± 3	PU gasket
100	12,3	40 ± 3	PU gasket
120	13,1	40 ± 3	PU gasket

The test of thermal conductivity (symbol) for PU foam was made in accordance with the norm PN-EN 12667. The calculation of thermal transmittance U was done in accordance with PN-EN ISO 6946.

Acoustic properties of the panels were tested in accordance with PN-EN ISO 20140 and PN-EN ISO 354 and classified according to PN-EN ISO 717-1 and PN-EN ISO 11654.

Table 5. Insulation and acoustic properties of PW PUR-S / PW PIR-S panels.

Panel thickness	Thermal transmittance U <sub>c</sub> value [W/m <sup>2</sup> ·K] PW PUR/PW PIR	Acoustic insulation R <sub>w</sub> (C, C <sub>tr</sub> ), [dB]	Noise absorption coefficient α <sub>w</sub> [-]
40	0,59	26 (-3, -4)	0,15
60	0,38	26 (-3, -4)	0,15
80	0,28	26 (-3, -4)	0,15
100	0,22	26 (-3, -4)	0,15
120	0,19	26 (-3, -4)	0,15

Fire tests of the panels were made according to PN-EN 11925-2, PN-EN 13823, PN-B-2867, PN-EN 1364-1. Fire classification was made in accordance with PN-B-02867, PN-EN 13501-1, PN-EN 13501-2.

Table 6. Fire classifications for PW PUR-S / PW-PIR-S panel.

Panel thickness	Fire resistance in accordance with PN-B-02867	Reaction to fire in accordance with PN-EN 13501-1 for PW PUR-S / PW PIR-S	Fire resistance in accordance with PN-EN 13501-2 for PW PUR-S / PW-PIR-S
40	NRO	B-s2,d0 / B-s1,d0	-
60	NRO	B-s2,d0 / B-s1,d0	-
80	NRO	B-s2,d0 / B-s1,d0	EI 20 / -
100	NRO	B-s2,d0 / B-s1,d0	EI 20 / EI 30
120	NRO	B-s2,d0 / B-s1,d0	EI 20 / EI 30

Tests for corrosion resistance of the sheets of the facings were conducted in accordance with proper test procedures in the Laboratory of Material Research and Protective Coatings of the Building Research Institute in Warsaw.

The assessment of corrosion resistance was done by the Building Research Institute on the grounds of PN-EN ISO 12944-2. The results confirmed that PaNELTECH panels can be safely applied in environments of corrosive atmosphere C1, C2, C3.

# WALL SANDWICH PANELS WITH HIDDEN JOINT, TYPE PW PUR-SU AND PW PIR-SU

## PANEL APPLICATION

PW PUR-SU and PW PIR-SU panels are applied as ceilings external walls and internal division walls, installed vertically or horizontally on single- or multi-span structure. Thanks to a special solution of the joint the fixing on the panel is hidden, which ensures very aesthetic appearance of the elevation.

In particular the panels can be applied in industrial buildings, store houses and logistic centres, commercial buildings and offices, food industry facilities, agricultural objects, sport halls.

Dimensions of panel are following:

- standard width: 1050 mm (option: 1000 [mm])
- available length: from 2 to 15,35 [m]
- available thickness: 60, 80, 100, 120 [mm]

## PANEL CHARACTERISTICS

Tables 7, 8 and 9 present chosen PW PUR-SU / PW PIR-SU panel characteristics.

Table 7. Thickness and weight of PW PUR-SU / PW PIR-SU panels.

Panel thickness	Panel weight	Foam density	Sealing on the joint
60	11,1	40 ± 3	PU gasket
80	11,8	40 ± 3	PU gasket
100	12,6	40 ± 3	PU gasket
120	13,4	40 ± 3	PU gasket

The test of thermal conductivity (symbol) for PU foam was made in accordance with the norm PN-EN 12667. The calculation of thermal transmittance U was done in accordance with PN-EN ISO 6946.

Acoustic properties of the panels were tested in accordance with PN-EN ISO 20140 and PN-EN ISO 354 and classified according to PN-EN ISO 717-1 and PN-EN ISO 11654.

Table 8. Insulation and acoustic properties of PW PUR-SU / PW PIR-SU panels.

Panel thickness	Thermal transmittance U <sub>c</sub> value [W/m <sup>2</sup> ·K] PW PUR/PW PIR	Acoustic insulation R <sub>w</sub> (C, C <sub>tr</sub> ), [dB]	Noise absorption coefficient α <sub>w</sub> [-]
60	0,39	26 (-3, -4)	0,15
80	0,29	26 (-3, -4)	0,15
100	0,23	26 (-3, -4)	0,15
120	0,19	26 (-3, -4)	0,15

Fire tests of the panels were made according to PN-EN 11925-2, PN-EN 13823, PN-B-2867, PN-EN 1364-1. Fire classification was made in accordance with PN-B-02867, PN-EN 13501-1, PN-EN 13501-2.

Table 9. Fire classifications for PW PUR-SU / PW PIR-SU panel.

Panel thickness	Fire resistance in accordance with PN-B-02867	Reaction to fire in accordance with PN-EN 13501-1 for PW PUR-SU / PW PIR-SU	Fire resistance in accordance with PN-EN 13501-2 for PW PUR-SU / PW PIR-SU
60	NRO	B-s2, d0	-
80	NRO	B-s2, d0	EI 15 / -
100	NRO	B-s2, d0	EI 15
120	NRO	B-s2, d0	EI 15

Tests for corrosion resistance of the sheets of the facings were conducted in accordance with proper test procedures in the Laboratory of Material Research and Protective Coatings of the Building Research Institute in Warsaw.

The assessment of corrosion resistance was done by the Building Research Institute on the grounds of PN-EN ISO 12944-2. The results confirmed that PaNELTECH panels can be safely applied in environments of corrosive atmosphere C1, C2, C3.

# ROOF SANDWICH PANELS, TYPE PW PUR-D AND PW-PIR-D

## PANEL APPLICATION

PW PUR-D panels are applied as roofs and roof covers on single- or multi-span structure. In particular the panels can be applied in industrial buildings, store houses and logistic centres, commercial buildings and offices, food industry facilities, agricultural objects, sport halls.

Dimensions of panel are following:

- standard width: 1050mm
- available length: from 2 to 15,35 [m]
- available thickness: 40, 60, 80, 90, 100, 120, 160 [mm]

## PANEL CHARACTERISTICS

Tables 10, 11 and 12 present chosen PW PUR-D / PW PIR-D panel characteristics.

Table 10. Thickness and weight of PW PUR-D / PW PIR-D panels.

Panel thickness	Panel weight	Foam density	Sealing on the joint
40/82	10,2	40 ± 3	PU gasket
60/102	11,0	40 ± 3	PU gasket
80/122	11,8	40 ± 3	PU gasket
90/132	12,2	40 ± 3	PU gasket
100/142	12,6	40 ± 3	PU gasket
120/162	13,4	40 ± 3	PU gasket
160/202	15,0	40 ± 3	PU gasket

The test of thermal conductivity (symbol) for PU foam was made in accordance with the norm PN-EN 12667. The calculation of thermal transmittance U was done in accordance with PN-EN ISO 6946.

Acoustic properties of the panels were tested in accordance with PN-EN ISO 20140 and PN-EN ISO 354 and classified according to PN-EN ISO 717-1 and PN-EN ISO 11654.

160/202	B <sub>roof</sub> (t1)	- / B-s2, d0	RE 30/REI 30

Tests for corrosion resistance of the sheets of the facings were conducted in accordance with proper test procedures in the Laboratory of Material Research and Protective Coatings of the Building Research Institute in Warsaw.

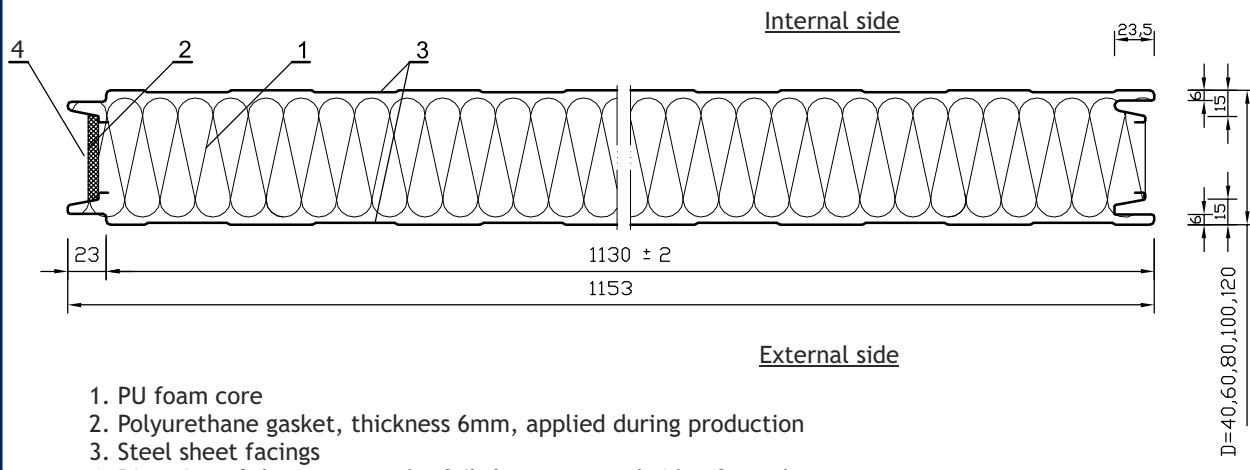

The assessment of corrosion resistance was done by the Building Research Institute on the grounds of PN-EN ISO 12944-2. The results confirmed that PaNELTECH panels can be safely applied in environments of corrosive atmosphere C1, C2, C3.

Draw. SU05

Drawings of PW PUR-SU joints were shown on respective panel PW PUR-S drawings

PW PUR-SU panels installed vertically	S10.1.; S11.1.; S11.2.; S12.1.; S15.1.; S15.2.; S20.1.; S20.2.; S22.1.; S24.1; S24.2.; S26.2; S28.2.; S40.1.; S40.2.; S41.1.; S43.1.; S47.1.; S48.1.; S48.2.
PW PUR-SU panels installed horizontally	S10.4.; S15.1.; S15.2.; S20.1.; S20.2.; S22.1.; S26.2.; S28.2.; S40.1.; S40.2.; S41.1.; S42.1.; S42.2.; S43.1.; S47.1.; S48.1.; S48.2.

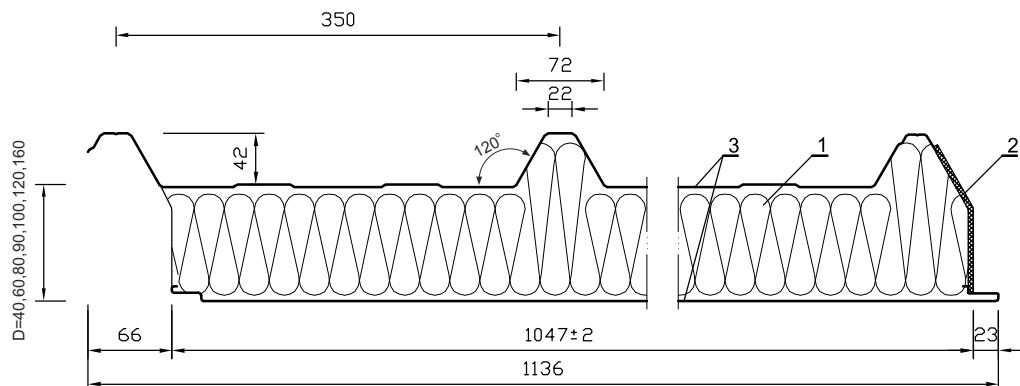

The above mentioned drawings do not show the specific PW PUR-SU joint.

DRAWINGS OF ROOF COVER DETAILS MADE OF PaNELTECH SANDWICH PANEL PW PUR-D\*

Roof sandwich panel PaNELTECH PW PUR-D 1050

Draw. D01

## Production scope

D = core thickness

1. PU foam core
  2. Polyurethane gasket, thickness 6mm, applied during production
  3. Steel sheet facings

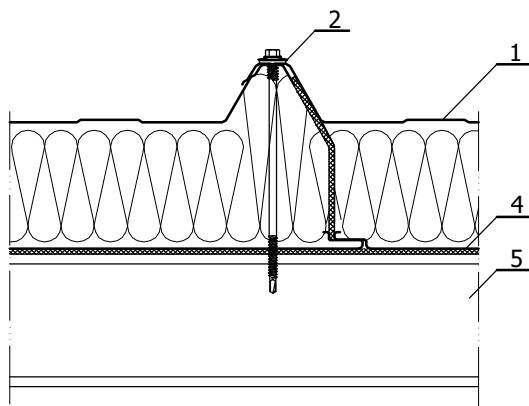

#### Available internal facing profiles

The diagram illustrates three horizontal lines representing different types of tracks:

- Linear**: A single continuous horizontal line labeled **L**.
- Groove**: A horizontal line labeled **R** with a vertical tick mark at its center, indicating a gap of 50 units.
- Smooth**: A horizontal line labeled **G** with two vertical tick marks, indicating a gap of 88 units between the two segments.

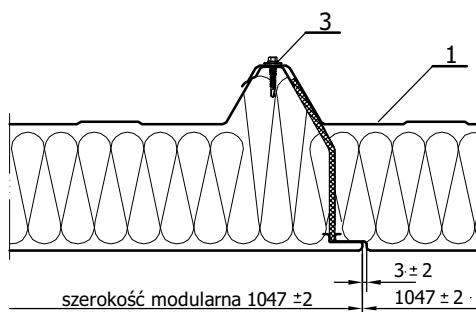

## Roof panel joint

Cross-section of the panel mounting to the construction with self-drilling screw

## Roof panel joint

Cross-section of the external facings joint with self-drilling screw (so called "farmer") in distance 300-400mm

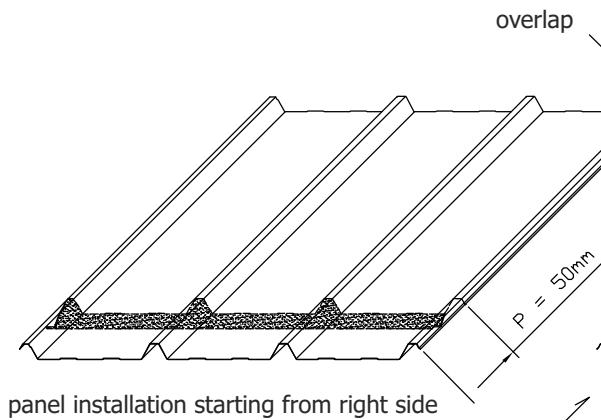

1. Roof panel PANELTECH PW PUR-D
  2. Self-drilling screw with EPDM washer
  3. Self-drilling screw with EPDM washer (So called "farmer")
  4. Polyethylene tape
  5. Steel construction according to building project

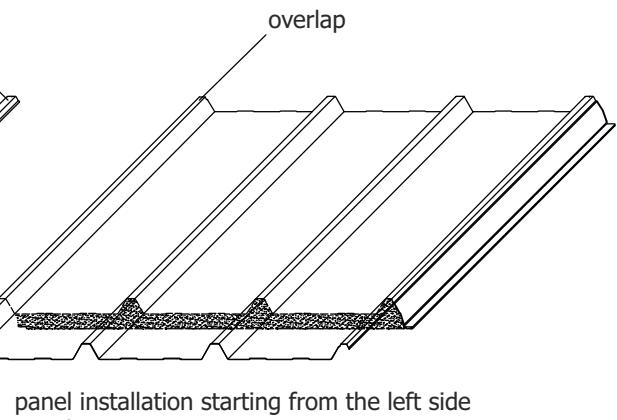

\* Drawings refer also to PW PIR-D panels.

Overlap cutting types

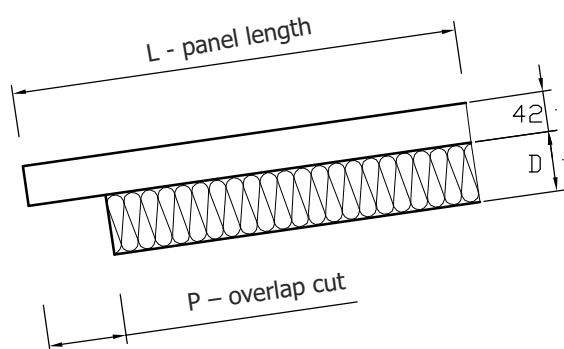

RIGHT OVERLAP CUT – PP

LEFT OVERLAPP CUT – PL

Overlap cutting dimensions

P = 0mm – no overlap cut

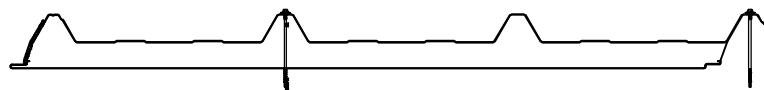

P = 50mm – overlap cut by the eaves  
(draw. D11.1 and D11.2)

P = 200mm – overlap cut by dilatation  
joint between panels (draw. D12)

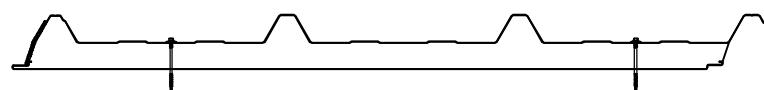

P = 250mm – maximal overlap cut

Suggested placement of the fixings:

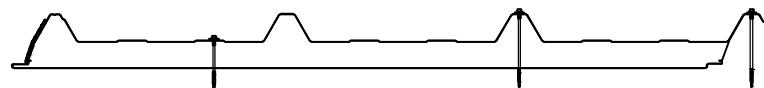

## 1. Standard placement \*

## 2. Placement in the roof ridge \*

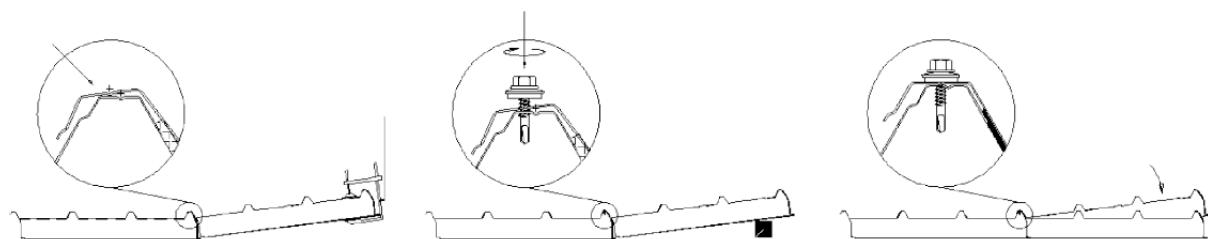

## 3. Placement in the edge roof panels \*

\* the number of fixings and distance between supports should be adjusted by the constructor depending on the wind loads and with reference to load bearing tables and spans.

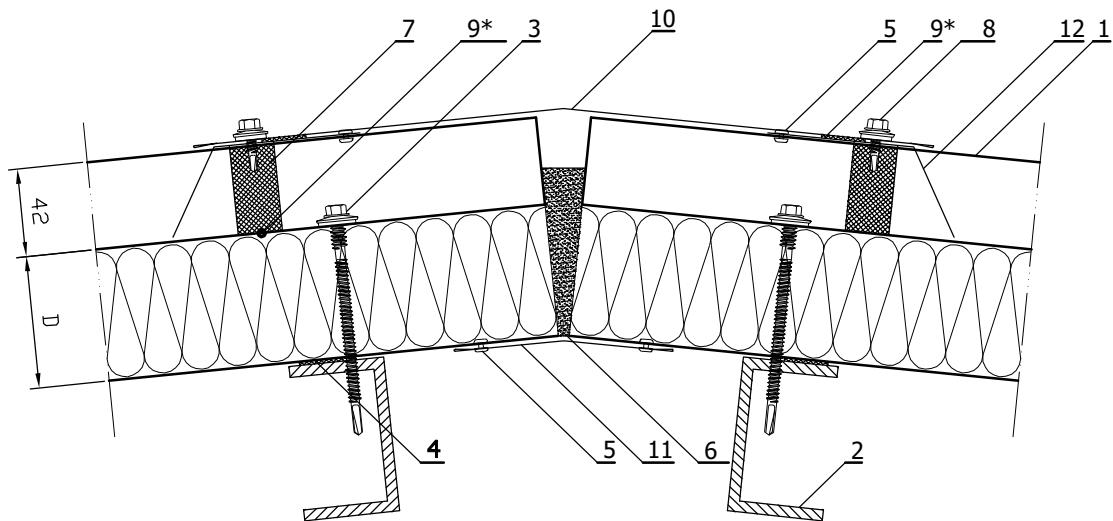

The longitudinal joint between roof panels should be reinforced by screws for sheet joining with EPDM washer in the span of 300 – 400 mm, installed on rib

During roof panels installation special attention should be paid to the connection between insulation core of the panels. Flexible polyurethane gasket should be fit tightly on the entire surface of the fixing, providing adequate air and water tightness. First panel should be fastened to the supports, than on the rib of this panel the overlap from the second panel should be applied at angle from other side and fix it with screw. Make sure that the screw goes exactly through the overlap and the rib. Than second panel can be placed on the first one and fastened to the supports.

Cycle of progressive application of the panels with the overlaps, fixing overlaps to the ribs, lowering next panel on each other and fastening panels to supports should be continued on the entire roof surface (see the drawings above).

Panel installation on the roof ridge – slope sectional view

7. External bearing profile – in accordance with building project
8. Water insulation – PVC membrane or building paper
9. Flashing
10. Overflow hole in the wall
11. Sealing mass for water insulation
12. Channel heating system

\* advised solution

The joint between roof panel and arc roof ridge skylight  
Horizontal section of the slope

1. Roof panel PaNELTECH PW PUR-D 1050
2. Steel structure in accordance with building project
3. Self-drilling screw
4. Polyethylene tape
5. Rivet 4x12mm
6. Insulation of the base of the skylight made on the building site
7. PU gasket UD42
8. Self-drilling screw for steel sheet
9. Flashing 140 (skylight base) or in accordance with individual project
10. Flashing 102
11. Flashing 146 (skylight plumage) or in accordance with individual project
12. Sealing mass for water insulation, recommended by low roof slope\*

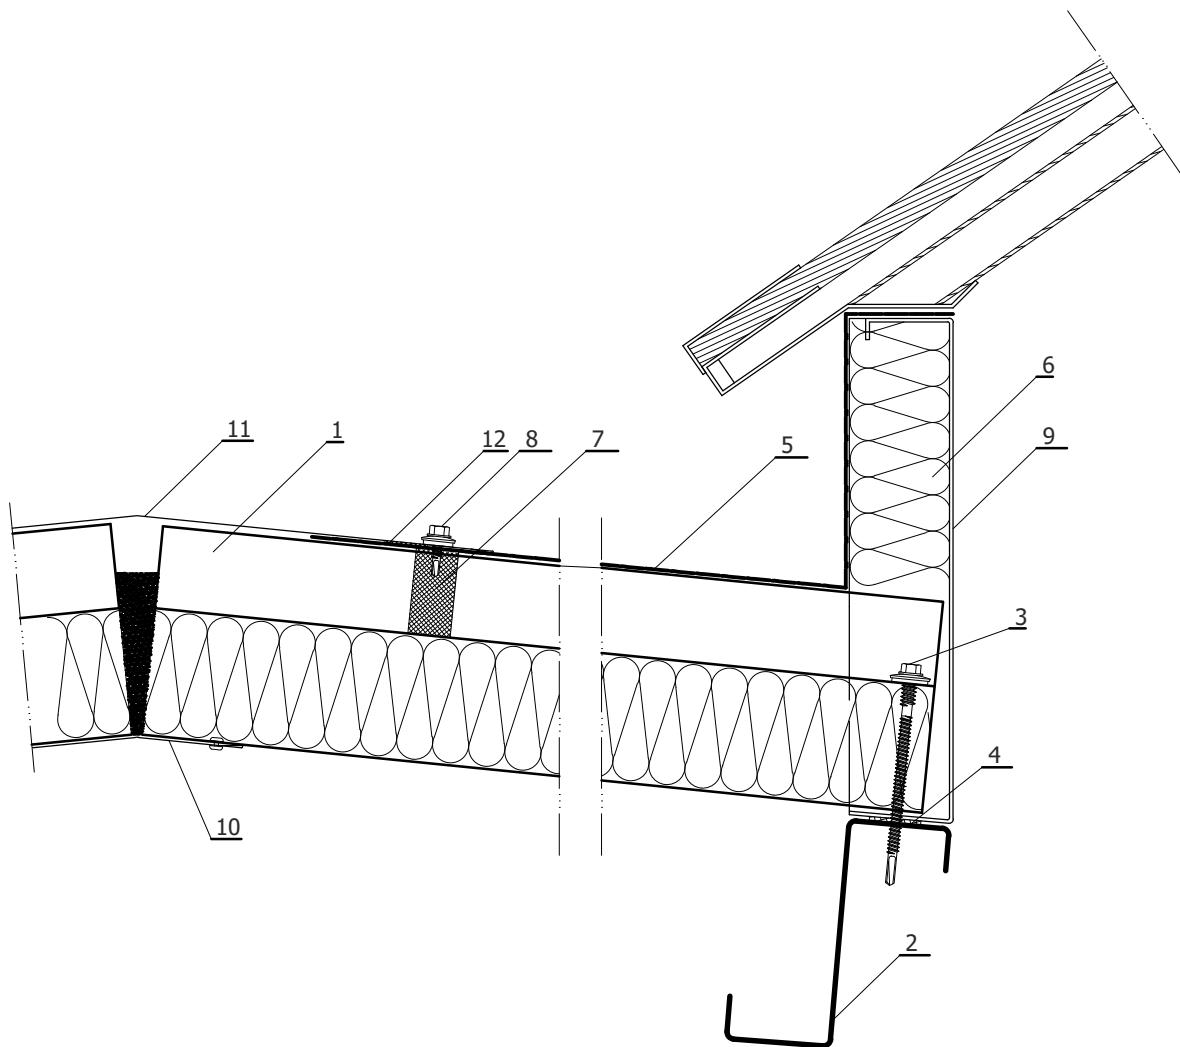

\* advised solution

## Roof sandwich panel PaNELTECH PW PUR-D 1050

Draw. D22.2

The joint between roof panel and arc skylight distant from the roof ridge

Horizontal section of the slope

1. Roof panel PaNELTECH PW PUR-D 1050
2. Steel structure in accordance with building project
3. Self-drilling screw
4. Polyethylene tape applied during installation
5. Water insulation – PVC membrane
6. Insulation of the base of the skylight made on the building site
7. PU gasket UD42
8. Self-drilling screw for steel sheet
9. Skylight base in accordance with individual project
10. Flashing 103
11. Flashing 101
12. Sealing mass for water insulation

# LOAD BEARING TABLES FOR PW PUR-S, PW PUR-SU AND PW PUR-D PANELS

Table 13. Maximal allowable spans for uniformly distributed wind characteristic load [ $\text{kN}/\text{m}^2$ ] for panel PW PUR-S 40 mm and PW PIR-S 40 mm.

External facing thickness	0,50 [mm]	ULS - Ultimate Limit State SLS - Serviceability Limit State														
Internal facing thickness	0,50 [mm]															
Outside temperature	+ 55°C, + 65°C, + 80°C, / - 20°C (summer/winter)															
Inside temperature	+ 25°C / + 20°C (summer/winter)															
Minimal width of extreme support	40 [mm]															
Minimal width of middle support	60 [mm]															
Required number of joints	a   b	a – on extreme support b – on middle support
